CANADA Canadian Museum of Water / Musée Canadien de l'Eau, Port McNicoll

The Canadian Museum of Water - Musée Canadien de l'Eau recently opened online in Spring 2022, and physical exhibit will be shortly inaugurated within the SS Keewatin, the only existing Edwardian steamship in the world.

As a community built around water trade, and aware that the indigenous communities are the original custodians of the land and water, conservation and defense are fundamental objectives for this Museum, which actively encourages decolonization and incorporates indigenous values and learning in its concept.

ITALY The Aqueduct Museum of Venice/ VERITAS, Venice

The Aqueduct Museum of Venice provides the story of water supply in Venice, a peculiar city which floats on water but doesn't have drinking water. To improve the quality of its water, the Municipality decided to use only water from the Brenta river for the city and to build a public aqueduct, taking water from pristine water wells near Padua. And on the 23rd June 1884, for the first time, water from a fountain set up in Saint Mark's square gushed out, coming from the public Aqueduct. Nowadays, the Aqueduct has a modern network of more than 5.000 km which distributes water extracted from one of the largest aquifers in Europe.

ITALY

Ecomuseum Adda di Leonardo, Milan

President: Marco Galli

ITALY Ecomuseum Adda di Leonardo / Milan

The Ecomuseum Adda di Leonardo unfolds around three waterways: the Adda River and the Martesana and Paderno *navigli**. Its territory has been shaped throughout the centuries by human efforts to use water as a resource, from the first Celtic settlements along the river to Medieval fortifications overlooking fords and ports, to the network of irrigation canals and waterways and the factories of the XIX century. The Museum aims to promote the cultural, historic and naturalistic heritage, in order to help create a sustainable local economy based on slow tourism.

Green Earth Alliance, Florida

Founder and President: Yelka Mikolji

USA Green Earth Alliance / Florida

The Green Earth Alliance aims to create a society that focuses on the importance of the conservation of our ecosystems. Conservation requires awareness and awareness requires effective multilateral communication. With artists, scientists, technologists, and representatives of different organizations all working as the Green Earth Alliance, it aims to bring in friends from all walks of life. All of them together, working as individual agents of conservation, is what will bring the change we require and need. The Green Earth Alliance proposes innovative ways to fund conservation projects.

Our Humanity Matters / OHM, New York

Founder: Tanja Andrejasic Wechsler

USA Our Humanity Matters / OHM, New York

Our humanity Matters (OHM) is dedicated to inspiring more enlightened and sustainable humanity that appreciates the beauty and joy of life and understands that everything is interconnected.

The vibrancy of clean, pristine water vital to the continuation of Life has been threatened by a current anthropogenic mindset. OHM aspire to change these human behaviors by building awareness that people are part of an extensive living system and its cycle, and that their actions impact the health of water, their health, and others. Its mission is to reconnect people with water and inspire its love and respect for a better planetary future.
